Krabat Pilot

The Krabat Pilot is an innovative and unique type of crawling aid that supports the child in a 4-footed stance with weight bearing through the hips and shoulders. The product is different than other types of crawling aids due to its adjustable gas spring which gives the child dynamic assistance to lift their pelvis. The amount of assistance given by the gas spring can be individually adjusted to meet the needs of the child. In addition, the height and length of the Pilot can be altered, making the Krabat Pilot suitable for children between the ages of 1-5 years.

The Co-Pilot system, which consists of two knee pads and two elastic bands, was developed to protect the child's knees and give adequate friction on wooden and linoleum floors. The elastic band limits hip abduction and guide into a crawling position.

Age Range (approx)	From 9 mos
A Inner Width	12 in.
B Width of Boards	10 in.
C Length of Tray	8 - 11 in.
D Total Width	15 in.
E Height	6 - 8 in.
F Total Length	12 in.
Pilot Weight	4.2 lbs
Max User Weight	55 lbs

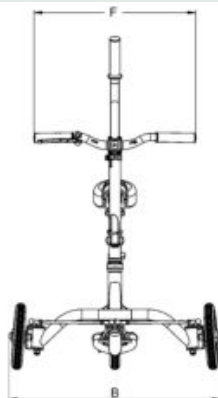

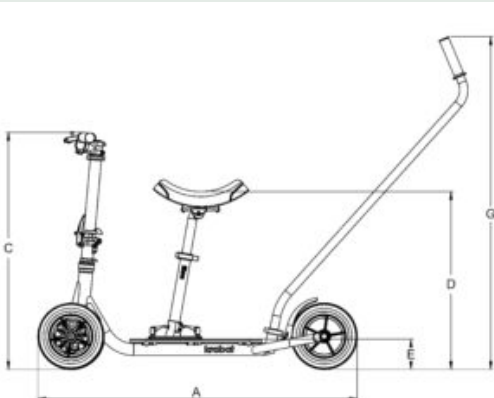

Krabat Runner

The Krabat Runner is a combined kick bike and walking bike for children with disabilities up to 77 lbs. The bike is set up with three wheels giving it great stability and making the aid safe to ride for the child.

The product comes with a detachable seat, transforming it from a walking bike to a kick bike. Both the seat and steering bar are height adjustable. The Krabat Runner's product weight of 13 lbs combined with the foldable steering bar makes it easy to transport.

Kick bikes have become a popular toy and means of transportation among children, teenagers and adults. "Up until now there hasn't existed such a product for children with special needs and we really wanted to do something about that", says industrial designer Andreas Langdalen Sørensen. He has, together with engineer Andreas Simensen, worked zealously on the project for more than two years. It started as a design driven innovation project in collaboration with "Design og Arkitektur Norge" (DOGA) and Geriljaworks where more than 100 product concepts came to life. One of these concepts was the Krabat Runner which Andreas and Andreas kept on working with together with the rest of the team at Krabat.

A Total Length	38 in.
B Total Width	25 in.
C Height at Steering Bar	25 - 32 in.
D Height at Seat	17 - 23 in.
E Height at Footboard	3.5 in.
F Steering Bar Width	19 in.
G Push Bar Height	39 in.
Runner Weight w/ Push Bar	16 lbs
Max User Weight	77 lbs

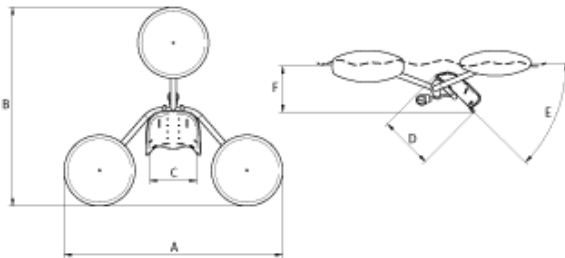

Krabat Pirat

Krabat Pirat is a floating aid that gives the child new opportunities to be independent in the water. The child is safely secured on a padded board with a pair of trousers and an optional back strap. The child is placed in a safe and engaging position on their stomach which allows the child to be active. The angle of the board can be adjusted from 0 degrees, where the child is laying horizontally, to 90 degrees where the child is in a standing position. The product can help the child to strengthen their neck and back muscles, improve upper and lower limb mobility and increase stability of the trunk.

The highly stable floating aid is suitable for children at all levels of functioning and comes in two sizes. Size 1 is suitable for children aged 2-8 years, and size 2 for children aged 8-18 years. Using the Pirat gives the carer more freedom to interact with the child because it is not necessary to spend time and energy on keeping the child afloat in the water.

The product is crafted from solid materials that will not rust. As a result it can be used in either a swimming pool, freshwater or salt water.

	Size 1	Size 2
Age Range (approx)	2-8 yrs	8-18 yrs
A Total Width	41 in.	41 in.
B Total Length	37 in.	37 in.
C Width of Board	9 in.	11 in.
D Length of Board	10 in.	14 in.
E Angle Adjustment	0°-90°	0°-90°
F Depth in Water	6 to 12 in.	7 to 16 in.
Pirat Weight	6.2 lbs	6.8 lbs
Max User Weight	154 lbs	154 lbs
