ADAPTIVE IMPORTS

Neo+ is a multipurpose positioning support for infants who have delay in their development and require supportive positioning.

# daytot neo+

## Supporting them from day one

Neo+ is a positioning support for infants aged 0-18 months who have delay in their development and require supportive positioning to strengthen their core, improve their patterns of movement or assist access to their environment.

Co-created with healthcare professionals, this mouldable support can be individually tailored for supervised lounging, playtime, and integrated into your child's therapy programme.

### PRODUCT FEATURES

- Suitable for use from birth (term) to 18 months
- Promotes central core strength, symmetry, and consistency.
- Facilitates a choice of key therapeutic positions (prone, supine, side lying).
- One size, with unique moulding ability to maintain its form until reshaped by the caregiver.

*Neo+ bundle (one size – incl. 2x cover sets, base cushion, pump and tote bag)*

## Clinical Benefits

- Early positioning offers infants the opportunity to benefit from improvements in comfort, body shape, range of movement and reduced tone.
- Set individual motor skill objectives to assess progress over time.
- Promotes the fundamental positioning principles of flexion, midline symmetry and consistency.
- Simple and easy to use, allowing for continuity of care between caregivers.

Neo+ can facilitate key therapeutic positions for early intervention use.

*Back lying (supine)*

*Tummy lying (prone)*

*Side Lying*

**daytot neo+**

is suitable for infants displaying the following:

- ✓ **Hypotonia** – due to muscle weakness or altered tone.
- ✓ **Poor central control affecting development** – due to surgery or long periods of time spent in supine.
- ✓ **Extensor patterning** – due to posturing, muscle imbalance +/- altered tone.
- ✓ **Skeletal asymmetries** e.g., Scoliosis, Torticollis, or head turning preferences.

## Size Guide

Max Weight	Age Range (Approx.)
Max 15kg / 33lbs	0–18 months

# Therapist testimonial

“ It was important to help Calvin catch up with his development especially as he was showing signs of having a preference to turning his head to one side. Supporting him with the Neo+ allowed him to be positioned to move against gravity to re-establish muscle strength and posture. ”

HIGHLY SPECIALISED PHYSIOTHERAPIST,  
THE ROYAL CHILDREN'S HOSPITAL, GLASGOW, SCOTLAND.
