JENX®
Positioning for life

Dreama™
by Jenx

The Dreama™ by Jenx is a support system for effective 24hr postural management, suitable for children and adults.

Key features

- **Easy to use on a number of bed frames including profiling hospital beds.**
- **Allows for good ventilation and airflow**
- **Can be used to position the user in an abducted lying position to aid hip development**
- **Infinitely adjustable positions thanks to the uniquely designed glide lock system**
- **Easy to keep clean and hygienic**

Age range: 9 months to Adult
Max user weight: 242lbs

Always Supportive...

Dreama™ by Jenx

An Improved Quality of Life.

The Dreama™ system by Jenx is a key part of any 24hr postural management program.

Recognizing that abnormal and posturally destructive tone is present 24/7, the Dreama™ system follows on from support offered by conventional positioning. Utilizing a variety of available support and positioning pads, the system can be configured to support even the most complex of postures.

Supporting at risk limbs and reducing tonal spasms, the Dreama™ contributes towards more recuperative periods of rest, which in turn has a positive contribution towards minimizing the risk of muscular skeletal deformity. Dreama™ can be used as a preventative system or to reduce the risk of further postural deterioration, and is appropriate for any age.

Dreama is ideal for any client who has a prescribed supported seating system and looks to maximize the positive impact of this system by continuing to work against the destructive influences of abnormal tone.

*Bed frame not included

showing the hugely effective way in which Dreama prevents a destructive posture and continues all the corrective and preventative work done by conventional 'daytime' seating positions.

Showing Dreama in side lying

INNOVATIVE FEATURE

Custom Profiles

The flexible aluminum base contours to create the lying surface of choice for each user, whether it's achieved by placing the base of Dreama™ on a profiling hospital bed or using rolls, wedges or cushions. This means it can be used for a range of different user requirements in a variety of environments (home, care homes, support centers etc).

INNOVATIVE FEATURE

Individual Covers

Individual covers mean any that are soiled can be removed and replaced without the need to remove the user from their bed, minimizing sleep disruption and the need for assisted transfers.

INNOVATIVE FEATURE

Glide-lock™ System

The unique Glide-lock™ system makes positioning simple! The base of the pad is inserted in to the channel on the base and the pad is gently pushed in to place. Once in place, simply let go and pushing on the pad won't cause it to move. To remove the pad, simply hold it and carefully slide it out. There are also 'Locking Feet', which can be screwed into place within the channels (they are removable and reusable) either to mark the place a pad should go (making it easier for carers to position a user) or to put behind the pad to prevent users with strong repetitive movements from gradually 'walking' the pad out of place during the night.

INNOVATIVE FEATURE

Modular Cushions

Each modular support cushion is 6" deep and upholstered in fire-retardant, water resistant, 2-way stretch, antibacterial fabric for infection control, as well as being breathable. The spaces between cushions allow airflow, helping to maintain a comfortable temperature. The individual cushions enable specific areas to be cleaned easily during the night with minimum disturbance.

INNOVATIVE FEATURE

Customizable and Configurable Positioning

Hundreds of individual specifications can be configured, specific to the user's needs. The extensive range of positioning options is possible because of the innovative modular system that allows the supports to slide easily into channels between the individual cushions. There are up to 16 available channels for the supports meaning that you can achieve exactly the position required.

INNOVATIVE FEATURE

Flexible Aluminum Base

The base is fixed to the bed using safety straps and the postural support cushions are then clipped into place.

Dreama™ 24 hour positioning system

Dreama™ by Jenx Technical Specification

	Units	Cot DC06	Twin Size DC15
Age Range (approx)	mo/yrs	9 mo - 4 yrs	9 mo - adult
