

Krabat Pilot

Innovative and unique crawling aid

The Krabat Pilot is an innovative and unique type of crawling aid that supports the child in a position on all four extremities with weightbearing through the hips and shoulders.

The product is different than other types of crawling aids due to its adjustable gas spring, giving the child dynamic assistance to lift their pelvis. The amount of assistance given by the gas spring can be individually adjusted to meet the needs of the child. In addition, the height and length of the board on the Pilot can be altered, making the Krabat suitable for children between the ages of 1-5 years.
